

■ Python Programming

Beginner Learning Portfolio

About This Repository

This repository documents my learning journey with Python. It contains beginner-friendly programs created while learning programming fundamentals, problem solving, and basic Python concepts.

Learning Goals

- Understand Python syntax and programming fundamentals.
- Practice variables, data types, conditions, and loops.
- Learn to write and use functions.
- Build confidence through small programming problems.
- Gradually move toward more advanced programming and problem solving.

Topics Covered

Area	Beginner Concepts
Basics	Variables, input/output, data types, operators
Conditions	if, elif, else
Loops	for loops, while loops
Functions	Defining and calling functions
Collections	Lists, tuples, dictionaries
Problem Solving	Simple mathematical and logical problems
Mini Projects	Small programs for practical practice

Repository Structure

basics/ — simple Python programs

conditions/ — decision-making programs

loops/ — practice with repetition

functions/ — basic function programs

mini_projects/ — small beginner projects

Sample Beginner Projects

Project	What it practices
---------	-------------------

Simple Calculator	Arithmetic operations and input
Even or Odd Checker	Conditions and operators
Number Guessing Game	Loops, conditions and user input
Simple Quiz	Conditions and basic program logic
Temperature Converter	Functions and calculations

Future Learning

The next steps are to strengthen Python fundamentals, practice problem solving, learn object-oriented programming, and eventually move toward Data Structures & Algorithms and AI/ML concepts.

Project Status

■ Beginner / Learning Stage

This repository is a record of consistent practice and gradual improvement in Python.

Built as part of my journey into Computer Science & Programming. ■
